Subject: **GWF TRACY COMBINED CYCLE POWER PLANT PROJECT, DATA ADEQUACY RECOMMENDATION (08-AFC-7)**

On June 30, 2008, GWF Energy, LLC, submitted an Application for Certification (AFC) to the California Energy Commission to modify the existing Tracy Peaker Plant (TPP) (01-AFC-16), a nominal 169-megawatt (MW) simple-cycle power plant, by converting the facility into a combined-cycle power plant with a new nominal generating capacity of 314 MW. The Energy Commission licensed the existing facility on July 17, 2002; it began commercial operation on June 1, 2003. The proposed project would occupy a 16.38-acre, fenced site within the existing GWF-owned 40-acre parcel in an unincorporated portion of San Joaquin County immediately southwest of Tracy, California, and approximately 20 miles southwest of Stockton, California.

The project would include the addition of two heat recovery steam generators, a steam turbine generator, an auxiliary boiler, an air-cooled dry condenser unit, and a 115-kilovolt (kV) electrical switchyard. The proposed project would use existing TPP infrastructure, including the existing natural gas pipeline, water supply pipeline, and electric transmission line. Three short segments of PG&E's 115 kV transmission system (totaling approximately 3 miles) would require reconductoring (upgraded wires to accommodate the added generating capacity). Process water would be supplied via the existing TPP pipeline from the Delta-Mendota Canal by the Byron Bethany Irrigation District. The applicant is proposing use of approximately 54.4 acre-feet per year (afy) of fresh water, an increase of 25.5 afy above current use.

Staff has completed its data adequacy review of the AFC and has determined that it does not meet all the requirements listed in Title 20, section 1704, and Division 2, Chapter 5, Appendix B of the California Code of Regulations for the 12-month process. Therefore, we recommend that the Energy Commission find the AFC inadequate and adopt the attached list of deficiencies. Of the 23 technical disciplines reviewed, we believe the information contained in the AFC is deficient in seven areas which are: Air Quality, Biological Resources, Cultural Resources, Paleontological Resources, Traffic and Transportation, Transmission System Design (Engineering), and Water Resources.

Attached is a summary table and data adequacy worksheets for all technical disciplines. The worksheets for the aforementioned sections identify the additional information that we believe is necessary to fulfill the AFC data adequacy requirements. At the Energy Commission's business meeting on August 27, 2008, I will recommend that the Energy Commission adopt the list of deficiencies and not accept the AFC until the additional information specified in the data adequacy worksheets is supplied. If you have any questions, please call Christopher Meyer, staff's Project Manager, at (916) 653-1639.

The existing noise levels shall be determined by taking noise measurements for a minimum of 25 consecutive hours at a minimum of one site. Other sites may be monitored for a lesser duration at the applicant's discretion, preferably during the same 25-hour period. The results of the noise level measurements shall be reported as hourly averages in Leq (equivalent sound or noise level), Ldn (day-night sound or noise level) or CNEL (Community Noise Equivalent Level) in units of dB(A). The L10, L50, and L90 values (noise levels exceeded 10 percent, 50 percent, and 90 percent of the time, respectively) shall also be reported in units of dB(A).	§ 5.7.4.1; Table 5.7-4; Appendix 5.7A	Yes
